ABOUT ME

After considering it for years, I decided to dedicate myself completely to what I like to do the most in my life, application developer, and adapting to the job market. I decided three years ago to be a professional Freelancer in BackEnd environments for Ruby on Rails. I have an important accumulated experience; my learning curve has been almost vertical in recent years, every day I learn various new things from the world of developers and for the same reason, every day I fall more in love with what ordinary mortals call work. A fundamental objective for me is the need to evolve and reinvent myself if necessary as a professional freelancer, with Ethics, Commitment, and Constancy. "I am a person who takes risks in situations that require it, for the benefit of my clients, in search of one or more solutions." I am someone who achieves what is proposed, I do not release an idea or project (personal or professional) until I master it, I believe in achievements as mechanisms to be happy. As a human being I do not know everything, the truth is that I do not know many things, in this profession it is the same, you can be sure that if I do not know something, I will have the frankness to say it bluntly and at the same time and if you give me the opportunity to learn it to apply it in the requirement that you ask me.

I always seek to improve myself, as a person and as a professional.

WORK EXPERIENCE

Freelancer Feb-2018 – at the present. I have worked intermittently as a Developer Backend Ruby on Rails in maintenance of portals such as the bank of time (timeoverflow), the Decidim engine, the Spanish soccer social network driwler.com and in other jobs that I cannot mention due to having signed confidentiality agreements. Without naming companies or the detail or content of the work, I will mention my work as a developer in RoR in a generic way.

- ✓ Optimized methods in models to take full advantage of the simplicity of the Rails Active Record.
- ✓ They asked me to thin the controllers of an app by taking all the code that did not belong to the controller to helpers or their models, in a specific case I reduced a controller from more than 3000 lines to less than 300 lines taking the code to helpers with methods of no more 15 lines, in this way I not only slimmed down the controller but many repeated routines could be optimized and reused.
- ✓ They asked me to move all views of a certain app from html.erb to .slim.
- ✓ I developed a complete chart module with <https://www.highcharts.com>, more than 20 charts without using any Ruby gem, because the charts had some special requirements that the available gem does not take into account. This I developed by instantiating the graphs in a class, creating a method for each graph type with a **hash** response that I exported to Javascript for the visualization of the graphs, the client wanted to have the possibility of being able to print 1, several or all graphs, the who have worked with highchart know that it is not straightforward to go from a view to pdf, since their graphics are not text or static images.

- ✓ I developed a payment gateway using Stripe, from the beginning; it is worth noting that it was a particularly interesting and fun job.
- ✓ I have also had the opportunity to develop tasks (rake) for some applications.
- ✓ I have worked with the Ruby gems of: pg (PostgreSQL RDBMS), mysql2, redis, byebug, letter_opener, devise, stripe, will_paginate, recaptcha, sanitize, omniauth, slim-rails, select2-rails, mini_magick, carrierwave, among others.

Cantv Sep-2000 – at the present. IT Consultant II. Responsible for the management and configuration of the software (SCM) for Cantv using the corporate tool Harvest. Manage and ensure the operational continuity and support of Harvest, SO and BD. Prepare and maintain life cycles and user accesses in IT projects for Cantv. Give technical support in SCM for Cantv units.

Cantv (COMPUSERMAN Cantv Contractor) Dec/1994 - Aug/2000 *Consultant*. Administration, support, maintenance, development and consulting of the HARVEST V5.1.1p14 and ENDEVOR V3R9 tools, these tools are version managers of source and load programs (ENDEVOR) and configuration managers for Client / Server, Web and Mainframe environments respectively.

STUDIES

- 2017 studying **Systems Engineering** at UNEFA
- 2016 **Master Certificate in Neuro Linguistic Programming (NLP)**
- 2016 **Professional Coach in Caracas Coaching**. 200 academics hours + 24 hours of internships evaluated
- 2007 Diplomat in **Leadership for Transformation: Best Leaders, Best Country**. 150 academic hours
- 1988-1991 **Superior Technician in Computer Science** at the IUTIRLA in La Guaira, Vargas State
- 1980-1985 **High School in Science** at the ICC Narciso Gonell in Catia la Mar, Vargas State

CERTIFICATIONS MOOC

- | | | |
|---|--------------|------|
| • Developer Backend with Ruby in Platzi | February 26, | 2018 |
| • Stylus Course in Platzi | May 22, | 2018 |
| • JavaScript Fundamentals in Platzi | May 4, | 2018 |
| • Professional Course de GIT y GITHUB in Platzi | February 4, | 2018 |
| • HEROKU Course in Platzi | November 30, | 2017 |
| • Postgresql Course in Platzi | October 22, | 2017 |
| • Ruby on Rails Course in Platzi | October 4, | 2017 |
| • Ruby Course in Platzi | September 8, | 2017 |

COURSES

- | | | | |
|--|----------|-------|------|
| • <i>Linux course</i> | 40 hours | July | 2015 |
| • <i>Shell Programming for System Administrators</i> | 32 hours | April | 2010 |
